

TrackJacket® Transit Solutions

Polycorp's TrackJacket® system is a family of products, designed to completely isolate the entire embedded track from the concrete roadway. The system handles all types of situations, including tangent track, insulated joints, axle counters, or special track work. An integrated isolation system for all applications, that achieves very high levels of stray current control, vibration isolation, and noise reduction, for even the most difficult applications.

Polycorp Transit products are used to completely satisfy all of your embedded track needs. Our Customers benefit from Polycorp's extensive field experience and proven results. Polycorp is constantly innovating new products that drive the transit market forward. Large savings in construction times and keeping on or ahead of project milestones has been demonstrated many times. Contact us for answers to your embedded track challenges and take advantage of our core strengths: **Innovation, Quality, Technical Support**, and most importantly, **Solutions**.

TrackJacket®

One system for all types of embedded tracks

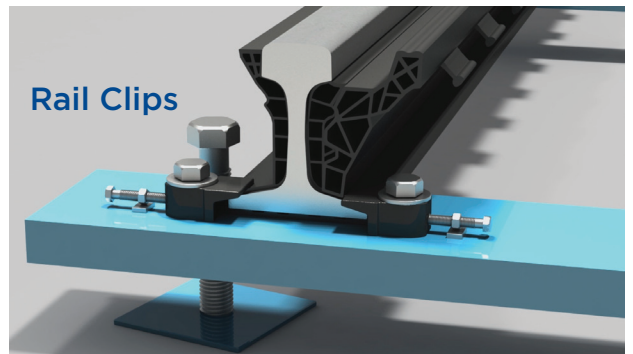

- Global leader in stray current control
- Significant noise attenuation for urban environments
- Maintenance benefits of vibration isolation

With the Polycorp TrackJacket® System, everything fits together perfectly, meeting every need from one end of the track to the other, and everything in between.
